

Citing its exceptional clinical expertise in breast health, use of the latest technology and outstanding patient care, GE Healthcare has selected Norwalk Radiology & Mammography Centers' Suite for Women's Imaging as the only National Showsite in Connecticut.

This designation deems Norwalk Radiology one of the country's premier facilities in mammography, breast MRI and general breast imaging. As a GE Healthcare National Showsite, Norwalk Radiology will host medical professionals from across the country to showcase its use of women's imaging products and services in a clinical setting. The goal of GE Healthcare's National Showsite Program is to promote a greater understanding of quality healthcare options and the benefits of healthcare research.

"Being selected as a GE National Showsite is a testament to the training of our physicians and clinical staff and our ongoing dedication to utilizing technology to better serve our patients," said Jesse Wexler, M.D., Medical Director of Norwalk Radiology & Mammography Center "This designation both allows us to share our clinical expertise with the country's leading breast health experts, and gives Norwalk Radiology access to the most up-to-date technology so we can continue to provide our patients with the best care possible."

Norwalk Radiology & Mammography Center is an American College of Radiology (ACR) Breast Imaging Center of Excellence, and its Suite for Women's Imaging pioneered the concept of addressing breast issues in a relaxing, supportive atmosphere in order to enhance the patient experience. The practice was also the first facility in Fairfield County to offer digital mammography services coupled with computer aided detection technology.

In addition to its stellar reputation in technological and procedural excellence, Norwalk Radiology's unique "Detection to Diagnosis in 48 Hours" service was of particular interest to GE Healthcare. Understanding how stressful a breast biopsy can be, Norwalk Radiology guarantees patients test results in days, rather than weeks.

Nationwide, there are only 50 GE Healthcare Showsites in such clinical modalities as radiology, cardiology and oncology. Other New England showsites include Boston's Massachusetts General Hospital and Rutland Regional Medical Center in Vermont.
